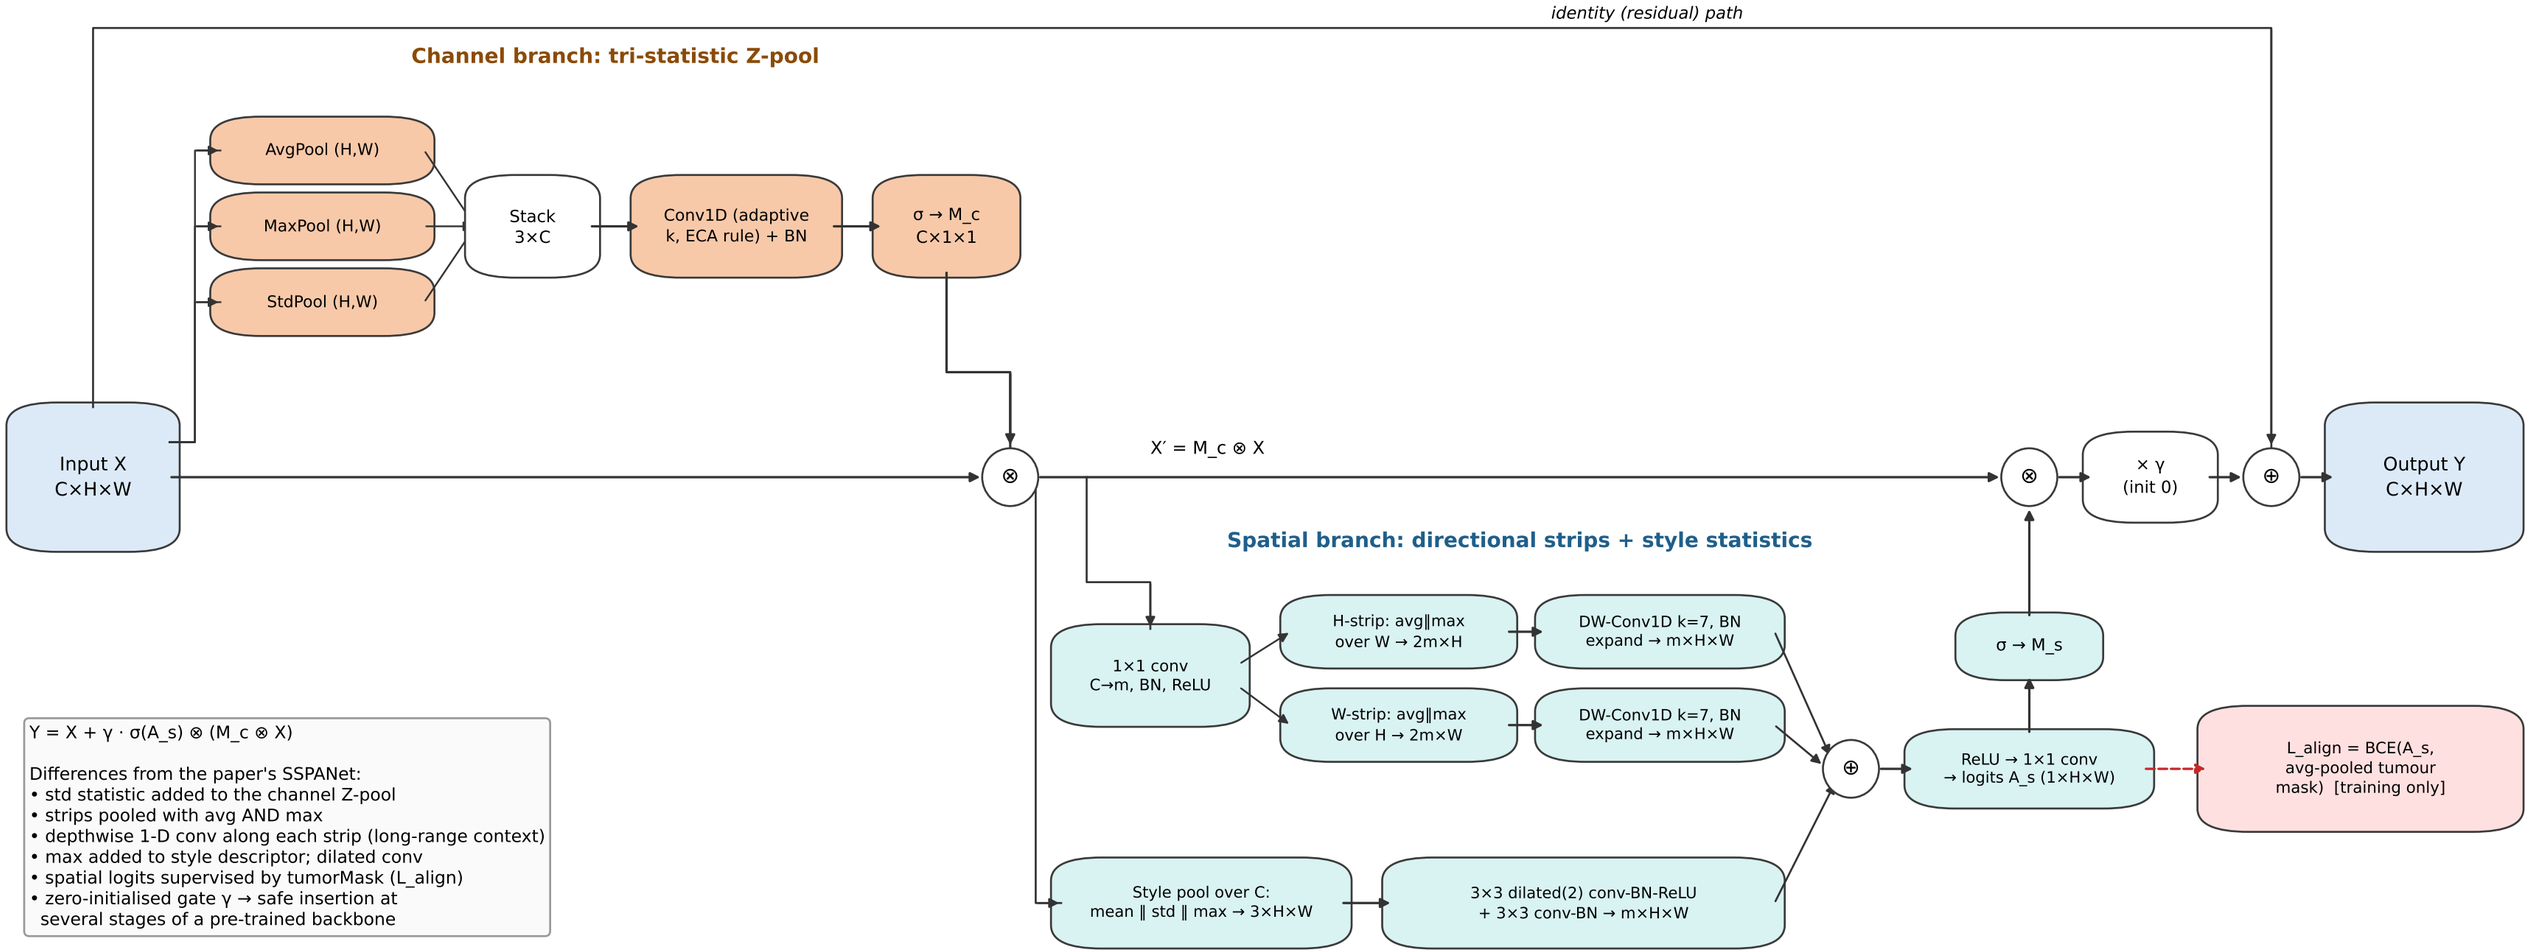
Fig. B - TGSA: Tumour-Guided Strip-Style Attention module (proposed sub-module 1)



Y = X + γ · σ(A_s) ⊗ (M_c ⊗ X)

Differences from the paper's SSPANet:
- std statistic added to the channel Z-pool
- strips pooled with avg AND max
- depthwise 1-D conv along each strip (long-range context)
- max added to style descriptor; dilated conv
- spatial logits supervised by tumorMask (L_align)
- zero-initialised gate γ → safe insertion at several stages of a pre-trained backbone
